

Semantic Web Technologies Research

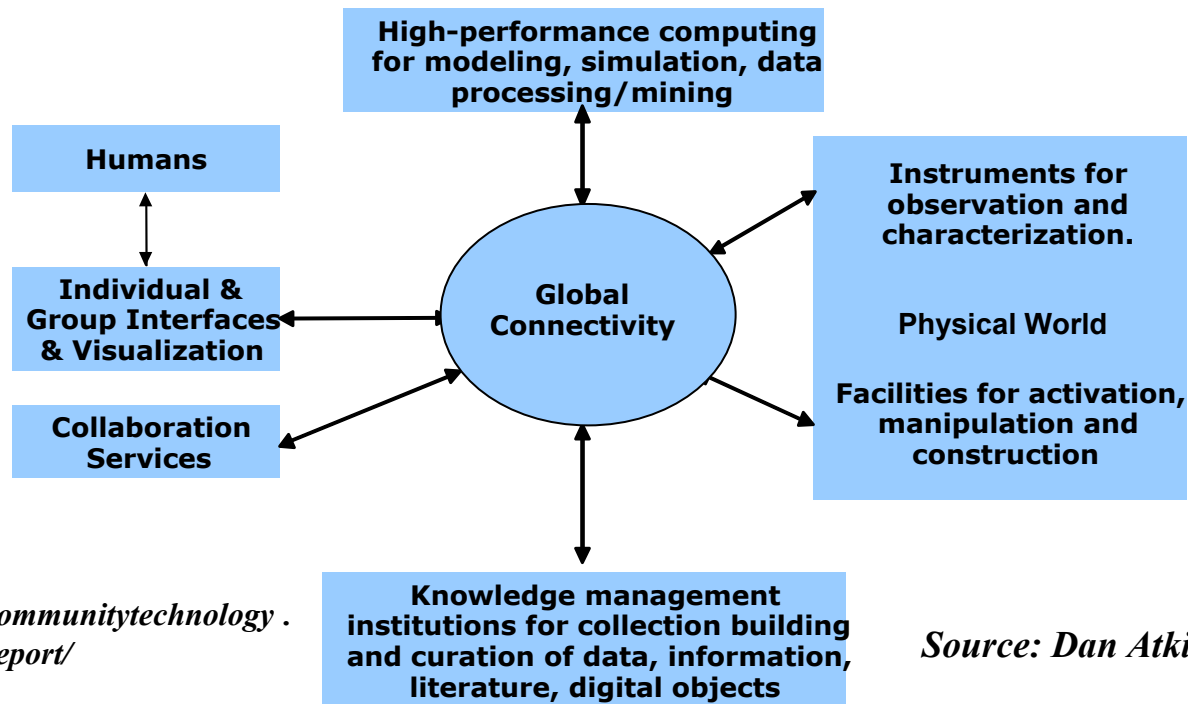

Code 588 / Walt Truszkowski

Semantic Web Technologies Research

- 
- Cyber-infrastructures
 - Globus Toolkit – middleware product
 - Middleware technologies for Grid Computing
 - Agent-Enabled, Grid-Oriented Network of Expert agents (AEGONE)
 - Agent-mediated Web-site
 - Semantic Web Interest Group (SWIG)

CYBER-INFRASTRUCTURE

Components of Cyber-infrastructure

http://www.communitytechnology.org/nsf_ci_report/

Source: Dan Atkins

Grid implies global (international) system for collaboration

The Globus Structure

Applications

EOS, GEOscience Network (GEON)
Mesoscale meteorology research,
Distributed data-intensive science,...

Application Toolkits

Remote computation, data grid,
remote visualization, portals

Grid Services & Middleware (Research Focus)

Protocols, authentication, policy,
resource management, workflow
management, discovery, events..

Grid fabric

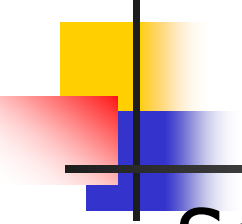

Computers, servers, network, etc.
and their associated services

Middleware Technologies for Grid Computing

- Work scheduling (Planning and scheduling)
- Security: Authentication and Authorization
- Data management and analysis across sites and organizations
- Knowledge-intensive processing in multi-disciplinary large-scale science
- Storage management for robust, efficient file management, transfer and sharing
- Network management services

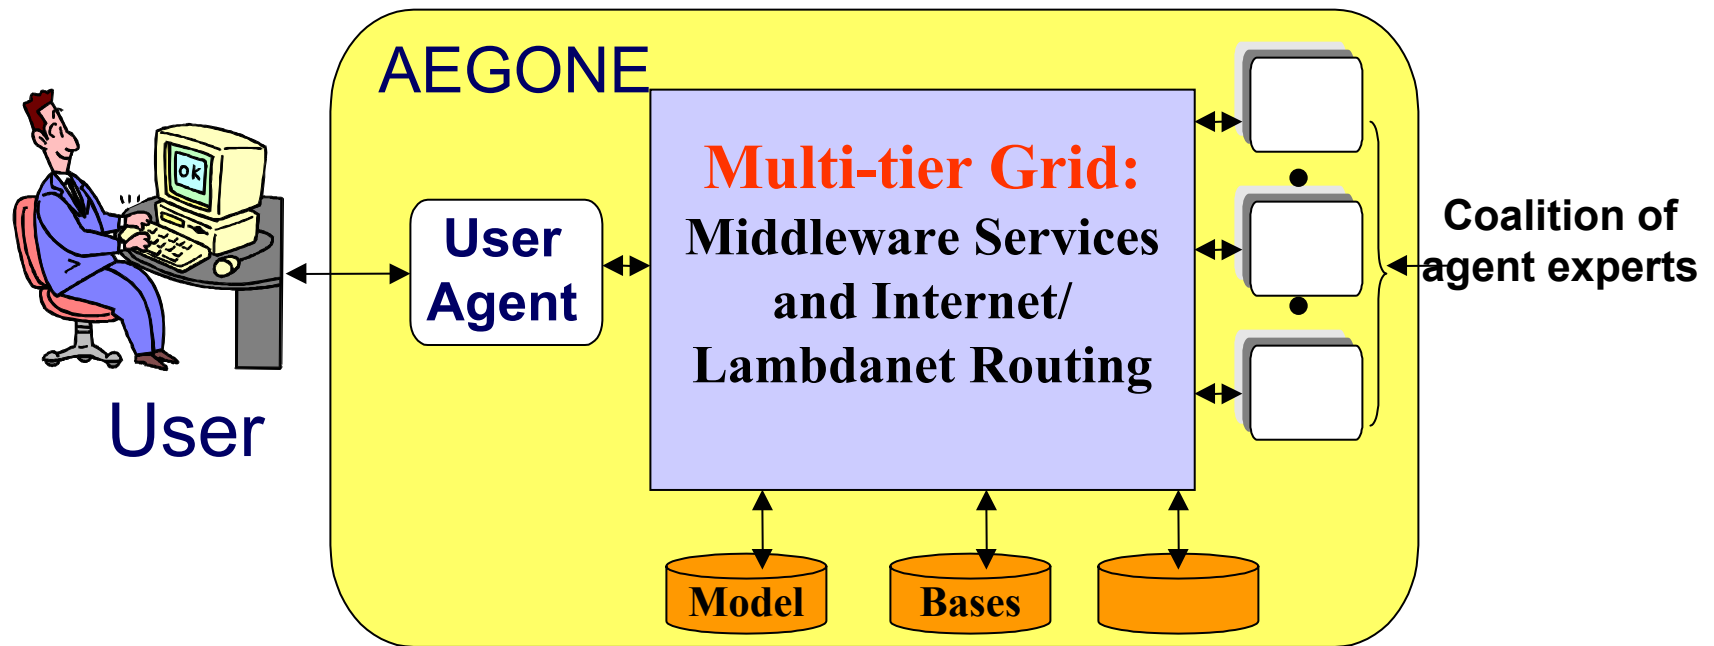

Middleware Technologies (cont.)

- 
- Semantic Web to support:
 - Transparent document sharing
 - Metadata annotations
 - Semantic integration and ontologies
 - Current Research Focus: Develop wrapper agents for each middleware technology to hide usage details from Grid users

Agent-mediated Grid Computing

Agent-Enabled, Grid-Oriented Network of Expert agents (AEGONE)

AEGONE Architecture

Agent-mediated Web-site

- The purpose of this activity is to gain experience in the application of semantic-web and agent technologies in making web-site information more easily accessible and maintainable.
 - Initial prototype has been developed by Matt Bandt/Code 588 to start demonstrating concept.

Agent-mediated Web-site (cont.)

- The initial prototype was developed by applying RDF and OWL to the Strategic Technology website in Code 588
 - Additional studies on this concept will be carried out by Dr. Karin Braitman from Brazil who will be visiting GSFC in February.

Semantic Web Interest Group (SWIG)

- The SWIG was started about three years ago to provide interested individuals with an opportunity to become aware of state-of-the-art developments in semantic-web technologies.

Semantic Web Interest Group

SWIG (continued)

- Informal SWIG meetings will continue
- NASA HQs has started a NASA SWIG Group – GSFC is participating
- Work is proceeding on the development of a projects ontology which will allow uniform access to project database information (headed by Harry Frisch/Code531)
- Work is continuing on the development of a standard ontology for GSFC Library use. Code 588 participates in the Metadata group headed by Gail Hodge (Library)
